

Semantic divergence is not accompanied by weaker evidentiary alignment

Dallas · source-balanced semantic alignment using query-relevant passages from recovered cited sources

ALIGNMENT WITH EACH CONDITION'S OWN EVIDENCE

50% recovered-source threshold · * Holm-corrected dimension effect

Semantic alignment is a similarity measure, not a test of factual support or claim entailment. Overall uses the prespecified outcome-level aggregate at the 50% threshold.

DIVERGENCE AND GROUNDING

ANSWER DIVERGENCE TRACKS STRONGER ALIGNMENT
